

5. Chapter-5 (Box Model)

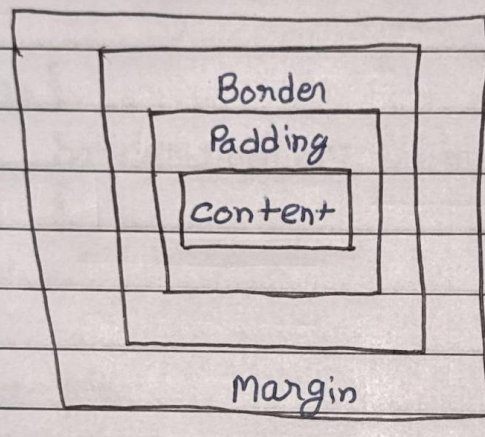

__/__/

→ Box Model

- Every HTML element in CSS is treated as a box.

X CSS me har HTML element ek box ki tarah behave karta hai.

→ Har ek ^{box} element) ke 4 parts hote hai

→ Easy memory trick

content → Padding → Border → Margin

i) Content

- The actual text, image, button, or any element inside the box.

X Jo actual content dikh raha hai (Text, Image, Button), usse content kahte hai.

example:

```
<p>Hello CSS</p>
```

Output:

Hello CSS

ii) Padding

- Padding is the space inside the border
- X Padding ham Content aur border ki bich ki space ko bolte hai

Syntax:

padding: 20 px;

Output: Without padding

Hello CSS

Output: With Paddings

Hello CSS

Remember:

- Padding increases the inside space.

<iii> Border

- Border is the line around an element.
- X Border element ke bahar wali hoti hai.

Syntax

border: 2px solid blue;

Output:

Hello CSS

iv) Margin

- Margin is the space outside the border.

X Margin Border ke bahar ki space hoti hai.

Syntax:

```
margin: 30px;
```

Output:

Without Margin	With margin
Box 1 Box 2	Box 1 Box 2

Remember: Margin increases the outside space.

v) Width

- Sets the width of an element.

X Element kitna chora (wide) hoga.

Syntax:

```
width: 300px;
```

vi) Height

- Set the height of an element

X Element kitna tall hoga

Syntax:

```
height: 150px;
```

<vii> Box-Sizing

- Controls how width and height are calculated
X Padding aur Border width ke andar hi count hota hai.
Isliye element ka size increase nahi hota.

Syntax:

```
box-sizing: border-box;
```

Example:

```
*{
```

```
  box-sizing: border-box;
```

```
}
```

without: Padding and border are added outside the width,
so the element size increase

with: Padding and border are included inside the width,
so the element size remains the same.

→ Cheat Sheet

```
/* Width */
```

```
width: 250px;
```

```
/* Height */
```

```
height: 150px;
```

```
/* Padding */
```

```
padding: 20px;
```

```
/* Border */
```

```
border: 2px solid blue;
```

```
/* Margin */
```

```
margin: 30px;
```

```
/* Box-Sizing */
```

```
box-sizing: border-box;
```

→ Practice

Task:

Create a Profile Card

HTML

- Profile Image
- Name
- Profession
- About me
- Contact Button

CSS

- Width → 300px
- Padding → 20px
- Border → 2px solid blue
- Margin → 30px
- box-sizing: border-box

6. Chapter 6 - Text & Fonts

→ Text & Fonts

- Text properties are used to style text, and font properties control how the text looks.

X Font properties use isliye karte hai ki text ka style change karne ke liye or design karne ke liye.

X ~~Font~~^{Text} properties use isliye karte hai ki text kaisa dikhega aur arrange hoga.

Text

(i) color

- change the text color.

X Text ka color change karta hai.

Syntax:

color: blue

Example: ~~@html~~

h1 {

color: red

}

(ii) text-align

- ~~Aligns~~ Aligns text horizontally

X Text ko left, right, center me karta hai.

Syntax:

text-align: center;

Examples:

h1 {

text-align: center;

}

<iii> text-decoration

- Adds or removes text decoration.

X Text ke niche ya upar line lagata hai ya hata deta hai.

Syntax:

text-decoration: none;

underline (Youtube.com)
overline (Youtube.com)
line-through (Youtube.com)
none (Youtube.com)

Output: (Before)

youtube.com

(After)

Youtube.com

iv> text-transform

- Change the letter case.

X Text ko uppercase, lowercase ya capitalize me badalta hai

Syntax:

text-transform: uppercase;

uppercase

lowercase

capitalize

none

Example: <h1>Hello </h1>

~~He~~ HELLO

hello

Hello

Hello

v) font-family

- Changes the font style.

X Text ki writing style ko change karta hai.

Syntax:

font-family: Arial, sans-serif;

* Arial is one of the most common fonts.

vi) font-size

- Changes the text size.

X Text ka size badhata ya ghatata hai.

Syntax:

font-size: 20px;

<vii> font-weight

- Makes text bold or light

X Text ko mota (Bold) ya patla karta hai

Syntax:

font-weight: bold;

normal

bold

100

200

~~Output:~~ <h3> HELLO </h3>

Output:

HELLO

HELLO

~~HELLO~~ HELLO

HELLO

(viii) line-height

- Controls the space between lines.

X Do text lines ke beech ki distance set karta hai.

Syntax:

line-height: 30px;

Example:

<h1> hello </h1>

<h1> World </h1>

Output:

hello

→ line-height: 30px

World

→ Cheat Sheet

/*Text Color */

color: red;

/*Alignment */

text-align: center;

/*Remove Underline*/

text-decoration: none;

/*Uppercase */

text-transform: uppercase;

/*Font */

font-family: Arial, sans-serif;

__/_/_/____

```
/* Size */
```

```
font-size: 20px;
```

```
/* Bold */
```

```
font-weight: bold;
```

```
/* Line Space */
```

```
line-height: 30px;
```

→ Task: Create a Welcome Page
HTML

- Heading
- Paragraph
- One Link

CSS

- Heading → Blue, Center, Uppercase
- Paragraph → 18px, Line Height 30px
- Link → Remove Underline
- Body → Arial Font.
